

Costea Environmental Compliance Program, Romania

EU-Commission, PHARE program

Service area	Contract value	Project duration
Environmental Consulting, Information Systems	€146,000	2000 - 2001

Purpose:

Privatisation of state owned industrial sites.

Our services:

- Sampling to get additional environmental analysis
- Environmental Impact Assessment
- Groundwater Modelling at the site of Nitramonia SA
- Presentation of reports with recommended measures and interventions to reach the conformity to EU environmental standards
- Cost estimation for the recommended measures of the site units

Project description:

For the achievement of this objective the working team proceeded to the revision/ completion and to the necessary validation of the existing Level I and Level II Environmental Impact Assessment Studies, based on the results obtained during the audit. All environmental pollutions, based on the operating processes of the industrial complexes, were identified. These operations had an effect on soil, water and atmosphere, as well as on human health, fauna and flora. The data forced the auditing team to revise/complete the existing environmental documentation and at the same time to elaborate additional environmental impact assessment verifications connected with well justified rehabilitation recommendations.

Further project data:

- 3 industrial sites with a property area of more than 420 ha
- Extended contamination of groundwater and soil
