

Remediation and Soil Protection Strategy at Retail Stations and other Oil & Gas installations, North-West Italy

ENI SpA, Refining & Marketing Division

Service area	Value as of 2015	Project duration
Contaminated Sites and Soil Protection, Remediation, Soil Protection Strategy	€13.5 million	2011 - ongoing

Project description:

The framework contract requires remediation and soil protection strategy at both active and inactive retail sites throughout five regions in NW Italy (Piemonte, Lombardia, Valle d'Aosta, Emilia Romagna).

The contract covers also other installations such as depots and pipelines, plus one refinery.

To date, over 200 S&GW remediation projects have been activated, utilizing a broad range of technologies from very basic "excavation & disposal" to more sophisticated approaches such as in-situ chemical oxidation.

All sites remediated or with in-situ remediation in progress are regularly monitored according to specific protocols agreed with the competent local regulatory agencies.

Purpose:

- Reduce contamination to within legally accepted limits without interfering with on-site activities

Our services:

- Installation and monitoring of remediation systems
- Waste management
- Soil and groundwater monitoring
- Reporting of ongoing remediation activities
- Interface with public agencies

Client benefits:

- Optimization of remediation costs
- Limited interference with on-site activities
